EV WNCAP EV WNCP EV WNMAP EV WNPTP EV WNPCP

- The Canopy system uses Point-to-Point and Point-to-Multipoint networks that can span distances ranging from two to 10 miles (3-15km) in a multipoint configuration, to as many as 35 miles (50km) in a Point-to-Point configuration.*
- Access Point (AP), is the central point for distributing traffic from the LAN, switch, or router to the various users, buildings, LANs and other network devices within the coverage area.
- Subscriber Module (SM), the receiver and access gateway located at the end-users premise that needs connection to the Access Point. It in turn connects to LAN, switch, router or other networking devices such as servers, IP-PABX, etc.
- Backhaul Unit (BH) provides the connection between Access Points or cluster of Access Points or from a service provider, switching station or headquarters of a private enterprise to an Access Point or cluster of access Points.

Concertina Wire

- Concertina wire is a type of barbed wire or razor wire that is formed in large coils which can be expanded like a concertina. Each coil actually consists of two oppositely wound helices which support each other against crushing while allowing easy longitudinal movement. In conjunction with plain barbed wire and steel pickets, it is used to form military obstacles.
- An insulated inner coil may be used for intrusion detection or passive electric repulse
- The barbs rips and the hook grads, unlike the prick of standard razor wire
- These are 3-4 times more points per meter than razor wire.
- The coil wire is hardened steel of 875kg. breaking strength.

Beam Sensor

- The capability of anti-jamming is ten times better than common sensors
- 6 times power surplus capacity works normally even in harsh environment
- Reliable quad active infrared photoelectric detectors, activates alarm only when two beams are blocked simultaneously, Nanometer material housing, prevent water, mold/corrosion and dust
- Multi-level LED alignment indicator, LED lights, buzzer, telescope and VOP-test, it is visual to understand the alignment and make precise alignment
- Traditional alignment adjustment of mirror and voltage tests
- Outdoor detection range: 250m (820ft), Power: 10.5 to 28V/DC, Maximum current: 140mA
